PUBLIC NOTICE

To All Residents and Occupants of the Downtown Area of the City of Port Wentworth:

Clearwater Solutions will be conducting **Smoke Testing** of the sanitary sewer system. The testing will begin on **Tuesday, October 15** and continue until the end of the month. This study will involve the opening and entering of manholes in the streets and public utility easements. The purpose of this testing is to locate breaks and defects in the city sewer system. The smoke will also reveal sources that storm and other surface waters enter the sewers.

A special non-toxic smoke will be used in these tests. The smoke is specially made for this purpose, leaves no residuals or stains, and has no effect on plant or animal life. The smoke has distinctive, but not unpleasant, odor. Visibility and odor last only a few minutes, where there is adequate ventilation.

Because the plumbing appliances in your house or building are connected to the sanitary sewer system, some smoke may enter your home or place of business if the:

- Vents connected to your building's sewer pipes are inadequate, defective, or improperly installed.
- Traps under sinks, tubs, basins, showers and other drains are dry, defective, improperly installed, or missing.
- Pipes, connections and seals of the wastewater drain system in and under your buildings are damaged, defective, have plugs missing, or are improperly installed.

All residents are advised that if traces of this smoke or its odor enter your house or building, it is an indication that gases and odors from the sewer may also enter. These can be both unpleasant and dangerous, as well as a health risk to the occupants. Should smoke enter your home or business, you may contact a member of the smoke testing crew working in your area.

The crew member will be able to help and check with you as to where the smoke has entered your building. Location, identification, and correction of the source of smoke that enters your building is urgently advised. Your cooperation will be appreciated.

The information gained from this testing will be used to improve your sewer services and may reduce the eventual cost to utility customers.

If you have any questions or concerns, please contact Chris Lee, at 864-293-5822.
